

I BUILD THINGS I ACTUALLY NEED.

INDEPENDENT SOFTWARE BUILDER / CLINICAL RESEARCH / NEUROSCIENCE

DALLAS-FORT WORTH / @SLAVEOFSOLACE

ON MY DESK

a browser shooter
a pool companion
a calmer security app

BUILT IN DFW / KEPT HONEST

HOW I WORK

Most of my projects start with something bothering me: a tool that hides too much, a workflow with too many tabs, or a game I wish existed. I keep digging until I understand the hard part, then build around it without pretending the rough edges are finished.

A FEW THINGS I AM DEEP INTO

01

KYX.IO

BROWSER FPS

An old-school arena shooter that runs in a tab. The hard part is keeping movement, combat, reconnects, and server authority honest when the network is not.

02

CuePilot

ON-DEVICE GUIDANCE

A pool companion that looks at the table after a miss and helps me think through the next shot. The camera is evidence, not an oracle, so every suggestion stays editable.

03

Soltex

WINDOWS SECURITY

A calmer Windows security view for seeing what changed, what is risky, and what action is actually worth taking. Nothing destructive happens by accident.

WHAT STAYS TRUE

START WITH A REAL ITCH

TEST WHAT CAN BREAK

CALL ROUGH PARTS ROUGH

WORKING RANGE

IN A BROWSER

TypeScript, Cloudflare, Three.js, Vite

ON A DESKTOP

C#, .NET, WPF, Swift, SwiftUI

BETWEEN THE CLICKS

Python, PowerShell, automation, extensions

BEFORE I CALL IT DONE

Accessibility, security boundaries, runtime evidence
